Art Unit: 2872

DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-15, drawn to a process for making a multilayer interference filter having substantially reduced net stress including the step of depositing a removable multilayer interference filter having a total thickness of greater than 8 microns over the first substrate or having a net stress greater than 50 MPa over the first substrate, classified in Class 427, subclasses 108 and 162.
 - II. Claims 16, 18, 19, 22-28, drawn to an optical filter assembly and process for making an optical filter assembly, and a method of separating optical communication signal channels, including the steps of providing at least one optical waveguide, classified in Class 359, subclass 580.
 - III. Claim 17, drawn to a multilayer optical interference filter having at least two optical cavities, a dielectric reflector stack, and a central region that is unsupported by a substrate and substantially free of stress, classified in Class 359, subclass 590.
 - IV. Claims 20-21, drawn to a multilayer optical interference filter substantially free of stress and having a central wavelength shift of less than 2 pm/deg C over a temperature range of 0-70 deg C, classified in Class 359, subclass 582.

The inventions are distinct, each from the other because of the following reasons:

Application/Control Number: 10/004,142

Art Unit: 2872

- Inventions I and II/III/IV are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the products claimed (i.e. Inventions II/III/IV) can be made by a materially different process, such as by lamination.
- 3. Inventions II and III and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, subcombination II has separate utility in a combination without the particulars of subcombination III or IV, subcombination III has separate utility in a combination without the particulars of subcombination II or IV, and subcombination IV has separate utility in a combination without the particulars of subcombination II or III. See MPEP § 806.05(d).
- 4. If Invention I is elected, then restriction to one of the following inventions is required under 35 U.S.C. 121:
 - A. Claims 1-10, drawn to a process for making a multilayer interference filter having substantially reduced net stress including the step of depositing a removable multilayer interference filter having a total thickness of greater than 8 microns over the first substrate, classified in Class 427, subclass 108.
 - B. Claims 11-15, drawn to a process for making a multilayer interference filter having substantially reduced net stress including the step of depositing a

Application/Control Number: 10/004,142

Art Unit: 2872

removable multilayer interference filter having a net stress greater than 50 MPa over the first substrate, classified in Class 427, subclass 162.

- 5. Inventions IA and IB are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, subcombination IA has separate utility in a combination without the particulars of the other subcombination IB. See MPEP § 806.05(d).
- 6. If Invention II is elected, then restriction to one of the following inventions is required under 35 U.S.C. 121:
 - A. Claims 16, 22-128, drawn to an optical filter assembly and process for making an optical filter assembly, classified in Class 359, subclass 580.
 - B. Claim 19, drawn to a method of separating optical communication signal channels, including the steps of providing at least one optical waveguide, classified in Class 385, subclass 27.
- 7. Claim 18 link(s) inventions IIA and IIB. The restriction requirement between the linked inventions is subject to the nonallowance of the linking claim(s), Claim 18. Upon the allowance of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s) depending from or otherwise including all the limitations of the allowable linking claim(s) will be entitled to examination in the instant application. Applicant(s) are advised that if any such claim(s) depending from or including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the claims of the continuation or divisional

Application/Control Number: 10/004,142

Art Unit: 2872

application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

- 8. Inventions IIA and IIB are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, subcombination IIA has separate utility in a combination without the particulars of the other subcombination IIB. See MPEP § 806.05(d).
- 9. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 10. A telephone call was made to Edward S. Sherman (707-579-0580) on 1/31/03 and 2/4/03 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

11. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in

the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

12. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arnel C. Lavarias whose telephone number is 703-305-4007. The examiner can normally be reached on M-F 8:30 AM - 5 PM.

The fax phone numbers for the organization where this application or proceeding is assigned are 703-308-7722 for regular communications and 703-308-7722 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-1782.

Arnel C. Lavarias February 6, 2003
